What is a Secure Volunteer Screen?

Secure Volunteer offers the most reliable screen available— a professional grade screen, which includes:

- (I) Address History Trace (AHTI):** This is a report revealing names, DOBs and addresses associated with a specific Social Security number. An AHT should go back at least seven years.
Why it's important: An AHT creates a profile of an individual's residence history; this profile determines what jurisdictions should be searched.
- (I) County Searches:** Based on the profile created from the AHT, each jurisdiction/county identified is searched.
Why it's important: County courts are the official court of record as most cases are filed and maintained here, meaning the most complete and accurate information is located here.
- (I) Nationwide Criminal Record Locator:** A database search of over 400 million criminal records regularly collected from over 2,500 public and proprietary sources. All hits are verified at the court of record.
Why it's important: Supplementing a county search with databases casts a wider net and helps find more records.
- (I) National Sex Offender Search:** A comprehensive, real-time search of registered sex offender registries in all 50 states plus D.C., Puerto Rico, Guam and Native American Tribal Registries.
Why it's important: Searching every available sex offender registry in real-time provides maximum protection from registered sex offenders gaining access to your students.
- (I) AKAs:** can include maiden names, nicknames or aliases.
Why it's important: Everyone doesn't always use the same name! Having as many possible names to search increases your chances of finding records.
